50X1-HUM

50X1-HUM

Topographic Section

The Section is organised into the following groups:

- a. Compilation (Room 1). This group compiles topographic maps from data supplied by field teams. Equipment includes several drafting tables, a coordinategraph, and two hectograph-type reproduction machines. The chief of the group is Zef Noci, an engineer. Noci also teaches cartography at the University of Tirana at night. Six or seven cartographic draftsmen are employed here including Ylber Gareci and Ana Trabioks.
- b. Triangulation or Control (Room 2). This office is responsible for providing the vertical and horizontal control required for mapping undertaken for Ministry of Geology projects. Most of the personnel in this section are employed in the field. Field teams work in groups of three, two professional surveyors and a recorder who is non-professional. A security officer (Signrimi) accompanies the teams.

The chief of the group is Alesse

Guda.

About 25 surveyors are attached to the group and about 10-12 recorders. Hence of some of the personnel are as follows: (by team)

- (1) Sefer <u>Sembloku</u>, topographic surveyor; and Agim <u>Paja</u>, recorder
- (2) Petrit Asllam, topographic surveyor and Ali Hyaka, topographic surveyor.
- (3) Esheref <u>Beshiri</u>, topographic surveyor; <u>Adem Mars</u>, topographic surveyor and Ginis (lnu/, recorder.
- c. Contours or Topography (Noom 3). This group is responsible for providing topographic contours and all other map information other than control for the Ministry of Geology topographic maps. Most of the personnel are engaged in field work. Contours are developed by plane table methods. The professional staff mambers are all military officers because only military schools offered training in this type of work. Field teams worked in groups of three or four, including a non-professional civilian assistant. The chief of this group is Philip Geci, a topographic engineer. Geci was formerly a colonel in the army but he was discharged in 1954. Other personnal include 2nd Lieutenants Istref Bulena, (fmu) Bushati, and Gani Bejo. All of these man are called military topographers. There are approximately ten field teams assigned to the group.
- d. Director for Administration (Room 4) Skender <u>Khungli</u> is in charge of administration.

C-O-M-F-I-D-E-N-T-I-A-L

-3-

- e. Computation (Rooms 5 and 6). The topographic surveyors used Rooms 5 and 6 as a place to work up their field notes into final form. Calculating machines were available for this purpose. These rooms were occupied mostly during the winter when field work was curtailed because of bad weather.
- f. Archives and Files (Room 7). Copies of all maps and geodetic control data used by the Section are filed in Room 7, including one copy of all maps produced by the Section, all triangulation lists completed by the Section, all military maps covering the Section's area of operation, triangulation lists obtained from the military needed for current operations and old Italian topographic maps. All maps and control data are locked in the room at night. The custodian, a party member, required signed receipts for any material taken from the room.
- g. Finance and Accounting (Booms 8 and 9).
- h. Soviet Advisory Group (Room 10). Six Soviet topographic engineers are assigned to assist the Section. Fjedor Sovjetkin and Andrea Aleksovig remain in this office and appear to have authority to censor maps at their discretion. The other four Soviets work in the field. Their salaries are roughly four times higher than their Albanian counterparts.
- Director (Boom 11). The Director of the Topographic Section is Rigget Goomb, a party master who was trained in Yugoslavia and Moscow University. He is not technically qualified for his job, but he achieved his high position through party connections.

5.

The Topographic Section has no personent field offices, but topographers nominally under the direction of the Section are assigned to field offices of the Ministry of Geology. These offices are called "Geological Enterprises." There locations, together with the number of assigned topographers are as follows: (The term "topographer" as used below includes both topographic surveyors and persons engaged in plane table contouring).

- a. Kemp Tropoj 3 topographers
- b. Quf Beri Puke number of topographers unknown
- c. Bulgiz 6 topographers
- d. Rabik 5 topographers
- e. Pogradec 8 topographers
- f. Valona 20-30 topographers are assigned to the Directorate of Petroleum in Valona. The group covers the entire area along the sea coast from Valona to Shkoder.

Semi-permanent Hinistry of Geology field offices, called "Geological Expeditions" were assigned, as of 1959. in Eurbinesh, Hartanesh, Gjinokastre, and Spac Hire Dite.

topographers were usually on assignment from the Topographic Section headquarters in Tirana.

13. All maps and vertical and horizontal control data were considered to be secret. Reeded material could be borrowed from the file room for use in the office or in the field but responsibility by individual borrowers was determined by a strict receipting system handled by the chief of the file room. All classified material had to be returned to the office at night except when it was being used in the field. A guard stationed at the entrance to the building kept out all unauthorised persons. Windows in the file room, compilation room, administrative officer's room and the Soviet advisor's room had both horizontal and vertical steel bars. The file room was locked as far 14. Field teams carried classified control data and maps in the field. When military maps were available for the area to be covered they also were carried, but all marginal information, including coordinates was cut off. Any information needed from the marginal data was carried in a separate notebook along with control data. Survey data obtained during the day was also carried in notebooks. Nost of the control work undertaken by our toems supplemented existing control data and was needed for compilation of large scale saps. A mamber of the Signrimi (Albanian security police) accompanied all field teams, and provided protection for the classified information we carried. He probably had responsibilities for watching the team itself. 1:50,000 scale military maps were confiscated by the Yugoslavian authorities. At night field team turned in their data and maps to the security officer who deposited the information with the local Sigurimi post or a local police station. Members of field teams were not allowed to carry cameras. 15 Assigned personnel did not need any special documents to obtain material from this room. Occasionally, when maps or data were needed that were not in the file room, they were obtained from the Ministry of Geology building next door A letter signed by the Director of the Topographic Section was needed to obtain material in this manner. 16 The Topographic Section probably has a complete set of all topographic maps of Albania and also copies of all topographic maps published by the Mapping Bureau of the Ministry of Defense. Control data covering areas of operations were also available. the archives of the Ministry of Geology also contain the same material and perhaps more. maps not available in the Topographic Section were obtained from the Ministry of Geology.

17.	the map file room in the Ministry of Geology
	is located on the second floor of the building, on the street side (as shown in Enclosure 2). Maps are kept in safes and the windows in the room are barred.
.ങ.	
	The Compilation office produces one ink drawn copy of each map. The final drawing is sent to one of the other Ministry of Geology buildings. the maps were printed
	eight copies are made and they are sent to the Ministry of Geology, the Security Police, the Prime Minister's office, the Ministry of Defense and the Soviet Advisory Group to the Ministry of Geology. The Topographic Section retains one copy. These copies bear a Ministry of Defense cache. These maps are prepared for the Ministry of Geology where they are used as bases for compiling geological maps.
	the final geological maps had the contours deleted.
19.	
	the government agencies involved in agriculture and transportation would have these maps
20.	
	In 1957 the Soviets re-occupied all the existing control stations and converted the coordinates to a new geodetic system. In addition, much new supplemental control was established. additional supplemental control was needed for the large scale mapping programs of the Topographic Section, Ministry of Geology. The Soviets completed their work in 1958 or 1959 and the new maps compiled by the Mapping Bureau are based on the new control.
